

Overview

This course will provide you with the knowledge, processes and tools you need to know what your risks are, how to assess them and how to design effective, achievable risk treatment measures. Next to that, it covers understanding your airport community and how to liaise with them in effectively managing risks.

A common risk treatment measure is developing an Emergency Plan, but just having a plan is not enough. The plan must be well-practised and tested. Exercising your plan is crucial to confirming it's effective, to build staff competency and confidence in disaster situations, and to confirm all information is up-to-date. Conducting exercises also build relationships with stakeholders and increases their confidence in your organisation.

Why Choose Southpac?

Southpac has the reputation for conducting the most practical and up to date aviation auditor training and ISO 9001 courses in the industry.

Southpac have been involved with Quality and Safety Management Systems and their application within the aerospace industry for over twenty years. We have the experience, resources and capability to address the many unique and diverse elements of management systems and auditing in the aviation industry.

"Southpac enjoys an enviable reputation with industry professionals from all over the world"
